Bank of America, N.A. (India Branches) Basel III Pillar 3 Disclosures

Table DF-1: Scope of Application

Name of the entity to which the framework applies: **Bank of America N.A. (India branches)**

The Basel III Pillar 3 disclosures contained herein relate to Bank of America, N.A. – India Branches (hereafter referred to as the “the Bank” or “BANA India”) for the year ended March 31, 2017. Bank of America Corporation (“BAC” or “the Company”) has a subsidiary, Bank of America, N.A. (“BANA U.S.”) into which BANA India is consolidated. The Pillar 3 disclosures are compliant with Reserve Bank of India (the “RBI”) Master circular DBOD. No. BP.BC. 1/21.06.201/2015-16 dated July 1, 2015 on BASEL III Capital Regulations along with Master circular DBOD. No. BP.BC. 5/21.06.001/2014-15 dated July 1, 2014 on Prudential Guidelines on Capital Adequacy and Market Discipline – New Capital Adequacy Framework.

RBI has implemented Basel III capital regulations effective April 1, 2013 with full implementation targeted in a phased manner by March 31, 2019.

Transitional Arrangements - BASEL III Capital Regulations

		March 31, 2017	March 31, 2018	March 31, 2019	March 31, 2020
Minimum capital ratios					(% of RWAs)
Minimum Common Equity Tier 1 (CET1)	A	5.5000	5.5000	5.5000	5.5000
Capital conservation buffer (CCB)	B	1.2500	1.8750	2.5000	2.5000
Global Systemically Important Banks buffer (GSIB)	C	1.5000	2.2500	3.0000	3.0000
Minimum Tier 1 capital	D	7.0000	7.0000	7.0000	7.0000
Minimum Total Capital (*)	E	9.0000	9.0000	9.0000	9.0000
Minimum Regulatory Capital Requirement	F = E + B + C	11.7500	13.1250	14.5000	14.5000
Internal Capital Guideline	G = F + 2% (#)	13.7500	15.1250	16.5000	16.5000

* The difference between the minimum total capital requirement of 9% and the Tier 1 requirement can be met with Tier 2 and higher forms of capital.
Current internal buffer over regulatory capital requirement, subject to annual review

Under BASEL III norms - transitional arrangements, the bank is required to maintain a minimum total capital to risk-weighted assets ratio (“CRAR”) of 11.75% (including CCB and G SIB requirement) and a minimum Common Equity Tier 1 CRAR of 5.5% and minimum Tier 1 CRAR of 7.0% as at March 31, 2017.

I. Qualitative disclosures:

The provisions of Accounting Standard (“AS”) 21 - Consolidated Financial statements, AS 23 Accounting for Investments in Associates in Consolidated Financial statements & AS 27 - Financial Reporting of Interest in Joint Ventures, issued by The Institute of Chartered Accountants of India (“ICAI”) and notified by the Companies (Accounting Standards) Rules 2006 do not apply to the Bank. BANA India has not invested its capital in any of the entities operating in India and owned by BAC. Further, the Bank does not have any interest in insurance entities. Hence the qualitative disclosures are only made for BANA India as a standalone entity.

Bank of America, N.A. (India Branches) Basel III Pillar 3 Disclosures

e. The aggregate amounts (e.g. current book value) of the bank's total interests in insurance entities, which are risk-weighted:

Name of the insurance entities / country of incorporation	Principle activity of the entity	Total balance sheet equity (as stated in the accounting balance sheet of the legal entity)	% of bank's holding in the total equity / proportion of voting power	Quantitative impact on regulatory capital of using risk weighting method versus using the full deduction method
Not Applicable				

f. Any restrictions or impediments on transfer of funds or regulatory capital within the banking group: Disclosures for BANA India are given as a standalone entity and therefore this disclosure requirement is not applicable.

Table DF-2: Capital Adequacy

I. Qualitative disclosures

The Bank is required to comply with all applicable laws and regulations in India including guidelines issued by RBI and other relevant regulatory bodies.

The Internal Capital Adequacy Assessment Process ("ICAAP") document assesses the capital adequacy for the Bank and details the process by which this assessment is made based on a reference date and looking forward, over a three-year planning horizon ("ICAAP Planning Horizon").

ICAAP establishes a framework for banks to perform a comprehensive assessment of the risks they face and relate capital to those risks. The capital analysis performed by the Bank is expected to encompass all risks, not just the risks captured by the Basel III Pillar 1 minimum regulatory capital calculation. Successful risk identification and measurement requires having a comprehensive process to quantify measure and aggregate these various risks in order to ensure that the Bank's capital resources are sufficient to cushion volatility in earnings due to unexpected losses.

The authority to develop the ICAAP document is delegated to the Finance department. The Bank's Chief Financial Officer ("CFO") is responsible for the production of ICAAP with inputs from Front Line Units ("Businesses "or "Business"), Independent Risk Management and Control Functions. Enterprise-wide functions, including Treasury and Control Function ("TCF") Risk and International Capital Management and Advisory ("ICMA") also review the ICAAP to ensure adequate challenge and consistency with Enterprise practices.

The Bank has established an Internal Capital Guideline ("IGL") and maintains capital levels in excess of this guideline. IGL is set above minimum regulatory requirements to serve as an early warning signal to prompt action and avoid a capital breach.

The ICAAP document is presented to the Asset Liability Committee ("ALCO") and the LMT for final review and approval on an annual basis. The ICAAP is also validated by Corporate Audit periodically, as required under RBI guidelines.

ICAAP is an integral management tool for determining the adequacy of the Bank's capital resources throughout the ICAAP planning horizon. It is also utilized to assess the risks being faced by the Bank and assess the adequacy of BANA India's capital under Baseline as well as Stress Scenarios over the ICAAP Planning Horizon. The ALCO and the LMT are responsible for acting at an early stage to prevent capital from falling below the minimum levels required to support risk characteristics.

Capital Requirements for Pillar 1 risks (i.e. Credit Risk, Market Risk and Operational Risk)

The Bank has adopted Standardized Approach ("SA") for credit risk, Standardized Duration Approach ("SDA") for market risk and Basic Indicator Approach ("BIA") for operational risk for computing its capital requirement.

Under the SA for credit risk, the Bank relies upon the ratings issued by the external credit rating agencies specified by the RBI for assigning risk weights for capital adequacy purposes under the Basel III guidelines. The risk weights applicable for claims against banks, sovereign, corporate and other Assets are as per the Basel III guidelines. In compiling the credit exposures, the Bank does not reduce cash collateral received if any, against credit exposures as eligible credit mitigants, as permitted by the RBI.

Under the SDA for computing the capital requirement for market risk, the Bank has adopted the "duration" method.

The minimum capital requirement for market risk is computed in terms of:

Bank of America, N.A. (India Branches) Basel III Pillar 3 Disclosures

a. "Specific risk" charge for each security, to protect against an adverse movement in the price of an individual security owing to factors related to the individual issuer.

b. "General market risk charge towards interest rate risk in the portfolio, where long and short positions in different securities or instruments can be offset.

Under the BIA, the Bank holds capital for operational risk equal to 15% of average positive gross annual income for the previous three financial years.

Risk Exposure and Assessment

Risk management is a disciplined approach to identify, analyze, assess and control unacceptable risk to minimize the volatility of financial results, drive sustainable earnings and protect the Bank's brand and reputation. The Bank takes a comprehensive approach to risk management, integrating it with strategic, capital and financial operating plans. Risk management and capital utilization are integral parts of the strategic planning process and are considered throughout the process to align the Business strategies with capital considerations. This holistic approach promotes the risk versus reward analysis needed to make informed strategic and business decisions.

Risk Framework integrates risk management activities in key strategic, capital and financial planning processes, day-to-day business processes and model risk management processes across Businesses.

The front line units have primary responsibility for managing risks inherent in their businesses. The bank employs an effective risk management process, referred to as Identify, Measure, Monitor and Control (IMMC), as part of its daily activities.

Some of the risks that the Bank is exposed to are described below:

- Credit risk is the risk of loss arising from the inability or failure of a borrower or counterparty to meet its obligations. The Bank defines credit exposure to a borrower or counterparty as the loss potential arising from all product classifications, including loans and leases, derivatives and other extensions of credit. The Bank's strong credit risk management system is a function of selective client base and regular monitoring. Exposure is predominantly short term.
- Market risk is the risk of loss due to changes in the market values of the Bank's assets and liabilities caused by changing interest rates, currency exchange rates, and security prices. Key market risk exposures are assessed at both specific and aggregate levels. At the specific level, market risk sensitivities are assessed by evaluating the impact of individual risk factors such as interest rates and foreign exchange. At the aggregate level, market risk is assessed using two key measures, which are Value-at-Risk ("VaR") and Bi-Weekly Maximum Observed Loss ("MoL"). All limit excesses are communicated to senior management for review.
- Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. Operational losses have remained low.
- Strategic risk including business risk is the risk that results from adverse business decisions, inappropriate business plans, ineffective business strategy execution, or failure to respond in a timely manner to changes in the macroeconomic environment, such as business cycles, competitor actions, changing customer preferences, product obsolescence, technology developments and the regulatory environment. BANA India manages strategic risk through the following approaches:
 - Assessment of strategic risk in connection with its strategic and operating plans through the ICAAP process.
 - Assessing earnings and risk profile throughout the year. These are periodically discussed in various governance committees.
- Liquidity risk is the potential inability to meet expected or unexpected cash flow and collateral needs while continuing to support our business and customer needs under a range of economic conditions. The primary objective of liquidity risk management is to ensure that BANA India can meet expected and

unexpected cash flow and collateral needs while continuing to support our businesses and customers with the appropriate funding sources, under a range of economic conditions. BANA India maintains a Liquidity Risk Policy (Branch Supplement) and Contingency Funding Plan for managing its asset and liability position in accordance with the RBI guidelines.

- Reputational risk is the potential that negative publicity regarding an organization's business practices will adversely affect its profitability, operations or customer base or require costly litigation or other measures. It is the potential risk that negative publicity regarding an organization's conduct, or business practices, will adversely affect its profitability, operations or customer base, or require costly litigation or other defensive measures, is by its nature extremely difficult to quantify and lends itself to being mitigated by good governance controls.
- Compliance risk is the risk of legal or regulatory sanctions arising from the failure to comply with requirements of banking and financial services laws, rules and regulations. Compliance is at the core of the Company's culture and is a key component of the risk management discipline

Risk Governance

BANA India has the following senior management level local committees or groups for risk governance.

Local Management Team ("LMT")

The LMT is chaired by the Country Executive Officer of the Bank. It is the primary body which provides strategic direction to the Bank and ensures compliance with regulatory requirements and the internal policies of the Bank. It is responsible for branch governance and oversight of branch operations. It is also responsible for reviewing and approving new business and products. It reviews the country performance with respect to strategic objectives. The LMT holds meetings six times in a financial year or more frequently if required. The LMT reviews and approves the ICAAP on an annual basis or upon any revision in the interim.

Asset Liability Committee ("ALCO")

The ALCO is chaired by the Country Executive Officer of the Bank. The ALCO is responsible for establishing policies and providing directives to manage the structural balance sheet risks arising over time, resulting from the Bank's business activities originating from the changing asset-liability mix. It provides management oversight of balance sheet, capital and liquidity management activities of the Bank. The ALCO holds meetings four times in a financial year or more frequently if required. The ALCO reviews and approves the ICAAP on an annual basis or upon any revision in the interim.

Risk Management Committee ("RMC")

RMC is chaired by the Chief Risk Officer. RMC serves as an oversight body to provide strategic direction for a progressive risk management system and policies & strategy to be followed to mitigate the risks associated with the business. RMC comprises senior management of the Bank and representatives from front line units and relevant control & support functions. RMC meets at least on a quarterly basis.

Customer Service Committee ("CSC")

Bank of America, N.A. (India Branches)

Basel III Pillar 3 Disclosures

Customer Service Committee ('CSC') is responsible for activities relating to customer service and client services issues. CSC meets four times in a year. The committee is chaired by Head - Banking Operations.

Audit Council

The Audit Council assists LMT in exercising oversight of the effectiveness of the Bank's system of internal controls and policies and procedures for managing and accessing risk, integrity of the financial statements of the Bank, and compliance by the Bank with legal and regulatory requirements. The Council also provides direct oversight over the audit function. The Audit Council meets at least four times in a year.

Technology Steering Committee ("TSC")

The TSC is chaired by the Chief Information Officer ("CIO"). The Technology Steering Committee (TSC) oversees projects in partnership with the Regional / Global Technology and other Functional teams across the Bank including common infrastructure or other projects cutting across businesses or support groups. The TSC meets at least six times in a year or more frequent, if required.

The TSC is mainly responsible for:

- To assist the Executive Management in implementing Information technology ("IT") Strategy that has been approved by the by global/regional and local management forums,
- Setting project priorities, reviewing critical project status and milestones,
- Monitoring IT governance, risk and controls, and
- Providing regular updates to the India LMT on significant Technology matters.

Regulatory Governance Group ("RGG")

Returns Governance Group (RGG) was formed based on guidance by RBI in 'Approach Paper on Automated Data Flow from Banks' and guidance on Supervisory Program for Assessment of Risk and Capital (SPARC). RGG is the governance body responsible for providing oversight to all regulatory submissions, including Risk Based Supervision. RGG, as required by RBI shall inter-alia comprise of representatives from Compliance, Business, Technology, etc. and perform inter-alia the following roles.

- Act as the owner of all the layers indicated in the end state from the process perspective and in the context of automated submission systems ensure governance around Data Acquisition, Data conversion and Data submission.
- Provide oversight and guidance to Technology Steering Committee, which is currently managing the automation of RBS reports, etc.
- Review and escalation point for Technology Steering Committee for handling change request for any new requirement by Reserve Bank and also handling ad-hoc queries.
- Ensuring governance that the metadata is as per the regulatory definitions.

Table DF-3: Credit Risk: General Disclosures

I. Qualitative disclosures

Robust risk management policies and procedures are laid out in the Global Banking and Markets Core policy. It is supplemented by the Credit Compliance Manual. Written policies, procedures, standards, and guidelines are updated on a regular basis to provide a clear direction to officers for meeting the requirements for which they are accountable. Approval authority is vested via an Approval Grid which takes into account the quantum, internal risk rating and nature of exposure and the position/experience of the approver.

Bank of America, N.A. (India Branches)

Basel III Pillar 3 Disclosures

The Bank manages credit risk based on the risk profile of the borrower or counterparty, repayment sources, the nature of underlying collateral, and other support given current events, conditions and expectations. Credit risk management begins with an assessment of the credit risk profile of the borrower or counterparty based on an analysis of their financial position. As part of the overall credit risk assessment of a borrower or counterparty, credit exposures are assigned a risk rating and are subject to approval based on defined credit approval standards. Subsequent to loan origination, risk ratings are monitored on an ongoing basis. If necessary, risk ratings are adjusted to reflect changes in the financial condition and cash flow of a borrower or counterparty.

The Bank has a policy of internal rating on a scale of Risk Rating ("RR") 1-11, and the RR is continuously monitored with a change in RR as and when it is warranted. Exposures with RR of 8 or more (criticized assets) are subject to intensive scrutiny by the senior management.

Definitions

- **Overdue:** Any amount due to Bank under any credit facility is 'overdue' if it is not paid by the due date.

Norms for determining when to classify various types of assets as non-performing

- Term loans are treated as non-performing if the interest and/or installments of principal remain overdue for a period of more than 90 days.
- Cash credits & overdrafts are treated as non-performing if the accounts remain out of order for a period of more than 90 days.
- An account will be treated "out of order" if the outstanding balance remains continuously in excess of the sanctioned limit/drawing power. In case where the outstanding balance is less than the sanctioned limit/drawing power, but there are no credits continuously for 90 days as on balance-sheet date or credits are not enough to cover the interest debited during the same period, these accounts will be treated as out of order.
- Bills purchased/discounted are treated as non-performing if the bill remains overdue and unpaid for a period of more than 90 days.
- Any overdue receivables representing positive mark-to-market value of a foreign exchange and interest rate derivative contracts will be treated as non-performing asset if these remain unpaid for 90 days or more, upon becoming due
- Any other facility will be treated as non-performing if any amount to be received remains overdue for a period of more than 90 days during the financial year

Table DF-4 - Credit Risk: Disclosures for Portfolios Subject to the Standardised Approach

I. Qualitative disclosures

The Bank adopts the following basis for assignment of risk weights for different categories of counterparties:

a. Scheduled Banks including foreign bank branches in India:

All exposures to scheduled banks for the purpose of Pillar 1 calculation, have been applied a 20% risk weight, since these exposures are made to counterparty banks having overall capital adequacy ratio of 9% and above.

b. Foreign Banks:

Ratings for foreign banks have been sourced from websites of Fitch, Moody's and Standard & Poor's. The bank has applied risk weights relevant to the ratings assigned by international credit rating agencies as prescribed by RBI.

c. Corporates:

Where the obligors have obtained rating of the facility from any of the accredited credit rating agencies viz. Brickwork Ratings India Pvt. Limited, Credit Analysis & Research Limited (CARE), CRISIL Limited, ICRA Limited (ICRA), India Ratings and Research Private Limited (Fitch), SME Rating Agency of India Ltd. (SMERA) as specified by the RBI, the Bank has applied the risk weights relevant to the ratings assigned by the credit rating agencies. Where the obligors have not obtained a rating, the exposures are taken as unrated and 100% risk weights applied.

BANA India does not transfer public issue ratings into comparable assets in the banking book.

II. Quantitative disclosures

a. Total Gross credit exposures

<i>INR mm</i>	31-Mar -17	31-Mar-16
Fund Based		
Below 100% risk weight	70,814	95,404
100% risk weight	191,365	104,813
More than 100% risk weight		
Deducted		
Total	262,179	200,217

<i>INR mm</i>	31-Mar -17	31-Mar-16
Non-Fund Based ⁵		
Below 100% risk weight	29,334	28,109
100% risk weight	28,169	37,147
More than 100% risk weight	76	
Deducted		
Total	57,579	65,256

⁵Includes market as well as non-market related exposures.

Table DF-5: Credit Risk Mitigation: Disclosures for Standardized Approaches

I. Qualitative disclosures

In determining credit risk capital, the Bank has not reduced the facility amounts by any corresponding eligible collateral amount in the form of cash margins.

The risk weighted assets are computed based on the gross outstanding facility amount.

II. Quantitative disclosures

The Bank has not availed Credit Risk Mitigation Techniques ("CMT") as at March 31, 2017

Table DF-6: Securitization Exposures: Disclosure for Standardized Approach

I. Qualitative disclosures

There are no securitization transactions originated by the Bank.

II. Quantitative disclosures

A. Banking Book

Total amount of exposures securitized by the Bank: Nil (March 31, 2016: Nil)

Amount of assets intended to be securitized within a year: Nil (March 31, 2016: Nil)

Total amount of assets securitized and unrecognized gain or losses on sale: Nil (March 31, 2016: Nil)

Aggregate amount of on-balance sheet and off-balance sheet securitization exposures purchased and break-up by exposure type

<i>INR mm</i>	31-Mar -17		31-Mar-16

Total	-	-	-	-	-	-

Securitization Exposures deducted entirely from Tier 1 capital, credit enhancing Interest Only Strips (I/Os) deducted from total capital, and other exposures deducted from total capital: Nil (March 31, 2016: Nil)

B. Trading book

- Aggregate amount of exposures securitised by Bank for which bank has retained some exposures and which is subject to market risk approach: Nil (March 31, 2016: Nil)
- Aggregate amount of on-balance sheet securitisation exposures retained or purchased: Nil (March 31, 2016: Nil)
- Aggregate amount of off-balance sheet securitisation exposures: Nil (March 31, 2016: Nil)
- Aggregate amount of securitization exposures retained or purchased subject to Comprehensive Risk Measure for specific risk : Nil (March 31, 2016: Nil)
- Aggregate amount of securitization exposures retained or purchased subject to securitization framework for specific risk broken into different risk weight bands: Nil (March 31, 2016: Nil)
- Aggregate amount of capital requirements for the securitisation exposures subject to securitisation framework: Nil (March 31, 2016: Nil)
- Securitisation Exposures deducted entirely from Tier 1 capital, credit enhancing Interest Only Strips (I/Os) deducted from total capital, and other exposures deducted from total capital: Nil (March 31, 2016: Nil)

Table DF-7: Market Risk in Trading Book

I. Qualitative disclosures

Market risk is the risk of loss due to changes in the market values of the Bank's assets and liabilities caused by changing interest rates, currency exchange rates, and security prices. Market risk is inherent in the Bank's operations and arises from both trading and non-trading positions. Trading exposures represent positions taken in a wide range of financial instruments and markets which expose the Bank to various risks, such as interest rate risk, foreign exchange risk, etc. The Bank manages these risks by using trading strategies and other hedging actions which encompass a variety of financial instruments in both the cash and derivatives markets.

Key market risk exposures are assessed at both specific and aggregate levels. At the specific level, market risk sensitivities are assessed by evaluating the impact of individual risk factors such as interest rates and foreign exchange. At the aggregate level, market risk is assessed using two key measures, which are Value-at-Risk ("VaR") and Bi-Weekly Maximum Observed Loss ("MoL").

VaR is a statistical measure of potential portfolio market value loss resulting from changes in market variables, during a given holding period, measured at a specified confidence level. The Branch uses historical simulation approach for VaR and it is calculated over a one-day holding period at a 99% confidence level, using three years of historical data. The performance of VaR model is monitored through daily back-testing and is performed at both Entity and Line of Business (LoB) level. MoL is the potential market value loss on a portfolio over a 10-day holding period using historical data with start date anchored to January 1st, 2007.

VaR and MoL are supplemented with stress tests, which are performed to assess extreme tail events or shocks. The stress tests are designed to highlight exposures to unlikely but plausible events or extremely volatile conditions, both hypothetically and historically.

Market Risk Management Architecture

The market risk function is independent of the front office and monitors all prudential limits governing trading activities and reports exceptions to senior management.

Market Risk Management Control

Market risk of the Branch is primarily managed through establishing and monitoring limits. Investment policy and FX/derivatives policy of the Branch (or BANA Mumbai) lists the applicable limits and approval processes.

Market Risk Management utilizes a suite of reports which assess risk on a daily basis. These reports are distributed to Senior Management on daily basis. Limit excesses, limit changes (temporary, or permanent) are communicated to Senior Management, as well as to relevant forum such as the LMT, Risk management Committee and the ALCO where applicable.

Market Risk Management Policies and Procedures

The Market Risk Management is guided by market risk policies and guidelines. Global market risk management policy is in place and is followed. The policy describes how market risk is managed by establishing the key market

Bank of America, N.A. (India Branches) Basel III Pillar 3 Disclosures

risk measures, defining roles and responsibilities and describing key monitoring processes in place. In addition, the Investment policy and FX/derivatives policy of the Branch lists the applicable limits and approval processes.

The market risk capital requirement is expressed in terms of two separately calculated charges:

- General market risk charge from the interest rate risk in the portfolio in different securities or instruments.
- Specific risk charge for each security, which is designed to protect against an adverse movement in the price of an individual security owing to factors related to the individual issuer.

For regulatory capital, the requirements for general market risk are designed to capture the risk of loss arising from changes in market prices and interest rates. The capital charge is the sum of four components:

- the net short or long position in the whole trading book.
- a small proportion of the matched positions in each time-band - vertical disallowance.
- a larger proportion of the matched positions across different time bands - horizontal disallowance.
- a net charge for positions in options.

The general market risk charge is measured by using the modified duration method. Foreign exchange open positions (higher of limit or actual) are risk-weighted at 100%.

- specific risk	-	0
Foreign exchange risk	1,227	1,083
Total	5,876	7,354

Table DF-8: Operational Risk

Operational Risk

It is the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. This definition includes legal risk.

Operational Risk Events

Inadequate or failed internal processes, people, systems and external events may result in unexpected or undesired consequences including a financial loss, an unexpected gain, a near miss and/or an opportunity cost (lost future revenue). The events associated with these unintended and/or undesired consequences are termed as operational risk events.

Operational Loss

An operational loss is the recorded financial consequence (excluding insurance reimbursements or tax effects) resulting from an operational loss event, including all expenses associated with an operational loss event except for opportunity costs, foregone revenue, and costs related to risk management and control enhancements implemented to prevent future operational losses. Operational loss events can also result in unintended financial gains. BAC classifies operational losses using the Basel II categories and definitions: Internal Fraud; External Fraud; Employment Practices and Workplace Safety; Clients, Products, and Business Practices; Damage to Physical Assets; Business Disruption and System Failures; and Execution, Delivery, and Process Management.

BAC manages the operational risks of its business activities using the enterprise-wide Operational Risk Framework. Enterprise-wide Operational Risk policies, processes, tools, and standards are established by Corporate Operational Risk ("COR") (Global Function) and implemented by Businesses / Enterprise Control Functions ("ECFs") with oversight from the Independent Business/ECF Risk Teams (Regional Function). Each have a quality assurance role and through direct action or oversight, these stakeholders are collectively responsible for execution of the Operational Risk Program requirements, achievement of risk management objectives, and ensuring timely action is taken in response to concerns and issues.

Governance of Operational Risk

Governance of BAC operational risk is accomplished through formal oversight by the Board of Directors ("the Board"), and the Chief Risk Officer ("CRO") and the Bank is aligned to the BAC's overall risk governance framework and practices through the LMT and the local risk oversight groups.

Risk Management Process

The BAC Enterprise-wide Operational Risk Management Program includes processes for identification, measurement, mitigating, controlling, monitoring, testing, reviewing and reporting operational risk information to management and the Board. This is implemented through 1) Risk and Control Self Assessment ("RCSA"), 2) Operational Risk Appetite, Key Risk Indicators ("KRIs"), 3) Scenario Analysis, 4) Operational Loss Event Data, 5) External Operational Loss Events, 6) Issues Management Process, 7) Quality Assurance ("QA") & Validation Framework. Certain elements of bank's operational risk program may only be performed at global level and / or at regional level by local operational risk officer. The results, relevant to Bank are shared with LMT.

Table DF-9: Interest Rate Risk in the Banking Book (IRRBB)

I. Qualitative disclosures

IRRBB represents the banking book's exposure to adverse movements in interest rates. Client facing activities, primarily lending and deposit taking, create interest rate sensitive positions on the balance sheet. This exposes the Bank to risk from changes in interest rates. These assets and liabilities essentially reside in the banking book.

IRRBB is measured using both earnings perspective (traditional gap analysis) and economic value perspective (duration gap analysis) and reviewed by the ALCO on a regular basis.

Earnings perspective (traditional gap analysis): measures the sensitivity of net interest income to changes in interest rate over the next 12 months. It involves bucketing of rate sensitive assets and liabilities in the banking book as per residual maturity/re-pricing dates in various time bands and computing the change in net interest income over a one year time horizon for 100 basis points upward and downward rate shocks.

Economic value perspective (duration gap analysis): measures the changes in the Market Value of Equity of the Bank for a 200 basis points upward and downward rate shock. It involves bucketing the interest rate sensitive assets and liabilities as per residual maturity in various time bands and computing the Modified Duration Gap ("MDG"). The MDG is used to evaluate the impact of the upward and downward rate movement on the Market Value of Equity of the Bank.

II. Quantitative disclosures

The increase / (decline) in earnings and economic value (on a pre-tax basis) for an upward/downward rate shock broken down by currency is as below

a. Impact on net interest income over the next 12 months (earnings perspective)

<i>INR mm</i>	31-March 2017		31-March 2016

Table DF-10: General Disclosure for Exposures Related to Counterparty Credit Risk

I. Qualitative disclosures

Discussion of methodology used to assign economic capital and credit limits for counterparty credit exposures;

A credit approval document is used to analyze the counterparty's creditworthiness, document transaction structure and risk mitigation, and approve the Traded Products limit(s). Specific requests, including limit structure and attributes is also included in the credit approval document. BANA India adopts standardized model and does not assign economic capital for counterparty credit exposures.

Discussion of policies for securing collateral and establishing credit reserve

Collateralization is one of the key credit risk mitigation techniques available in the market. The term "Collateral" means assets pledged as security to ensure payment or performance of an obligation. When facing derivative counterparties, BAC enters into master netting arrangements and, in appropriate circumstances, collateral arrangements which provide in the event of a customer default, the right to liquidate collateral and the right to offset counterparty's rights and obligations. BAC also monitors the fair market value of the underlying securities used as collateral, including accrued interest, and, as necessary, requests additional collateral to ensure that the relevant transactions are adequately collateralized. BANA India makes appropriate provisions for credit risk as per regulatory guidelines.

Discussion of policies with respect to wrong-way risk exposures

Transactions that include significant positive correlation between the performance of the counterparty and the exposure profile of the underlying product are called Wrong Way Risk ("WWR") trades. The BAC Wrong Way Risk Policy outlines the characteristics of WWR trades, and describes the approval escalation requirements and associated monitoring and reporting of WWR exposure.

Discussion of the impact of the collateral the bank would have to provide given a credit rating downgrade

As per local contractual agreements, BANA India is not required to post any collateral given a credit rating downgrade.

Table DF-13: Main Features of Regulatory Capital Instruments

The Bank has not issued any Regulatory Capital instruments

Disclosure template for main features of regulatory capital instruments	
1	Issuer
2	Unique identifier (e.g. CUSIP, ISIN or Bloomberg identifier for private placement)
3	Governing law(s) of the instrument
	<i>Regulatory treatment</i>
4	Transitional Basel III rules
5	Post-transitional Basel III rules
6	Eligible at solo/group/ group & solo
7	Instrument type
8	Amount recognised in regulatory capital (Rs. in million, as of most recent reporting date)
9	Par value of instrument
10	Accounting classification
11	Original date of issuance
12	Perpetual or dated
13	Original maturity date
14	Issuer call subject to prior supervisory approval
15	Optional call date, contingent call dates and redemption amount
16	Subsequent call dates, if applicable
	<i>Coupons / dividends</i>
17	Fixed or floating dividend/coupon
18	Coupon rate and any related index
19	Existence of a dividend stopper
20	Fully discretionary, partially discretionary or mandatory
21	Existence of step up or other incentive to redeem
22	Noncumulative or cumulative
23	Convertible or non-convertible
24	If convertible, conversion trigger(s)
25	If convertible, fully or partially
26	If convertible, conversion rate
27	If convertible, mandatory or optional conversion
28	If convertible, specify instrument type convertible into
29	If convertible, specify issuer of instrument it converts into
30	Write-down feature
31	If write-down, write-down trigger(s)
32	If write-down, full or partial
33	If write-down, permanent or temporary
34	If temporary write-down, description of write-up mechanism
35	Position in subordination hierarchy in liquidation (specify instrument type immediately senior to instrument)
36	Non-compliant transitioned features
37	If yes, specify non-compliant features

Not Applicable

Table DF-14: Full Terms and Conditions of Regulatory Capital Instruments

Instruments	Full Terms and Conditions
The Bank has not issued any Regulatory Capital instruments	

Table DF-15: Disclosure Requirements for Remuneration

The Bank's compensation policies including that of CEO's, is in conformity with the Financial Stability Board principles and standards. In accordance with the requirements of the RBI Circular No. DBOD No.BC.72/29.67/001/2011-12 dated January 13, 2012; the Regional Office of the Bank has submitted a declaration to RBI confirming the aforesaid matter and hence this disclosure is not applicable.

Table DF-16: Equities – Disclosure for Banking Book Position NIL

Table DF-17: Summary Comparison of Accounting Assets vs Leverage Ratio Exposure Measure

	Item	Rs. In Millions
1	Total consolidated assets as per published financial statements	348,451
2	Adjustment for investments in banking, financial, insurance or commercial entities that are consolidated for accounting purposes but outside the scope of regulatory consolidation	-
3	Adjustment for fiduciary assets recognised on the balance sheet pursuant to the operative accounting framework but excluded from the leverage ratio exposure measure	-
4	Adjustments for derivative financial instruments	58,675
5	Adjustment for securities financing transactions (i.e. repos and similar secured lending)	-
6	Adjustment for off-balance sheet items (i.e. conversion to credit equivalent amounts of off- balance sheet exposures)	37,331
7	Other adjustments (Asset amounts deducted in determining Basel III Tier 1 capital)	(31)
8	Leverage ratio exposure	444,426

Table DF-18: Leverage Ratio Common Disclosure Template

	Item	Rs. In Millions
	On-balance sheet exposures	
1	On-balance sheet items (excluding derivatives and SFTs, but including collateral)	239,362
2	(Asset amounts deducted in determining Basel III Tier 1 capital)	(31)
3	Total on-balance sheet exposures (excluding derivatives and SFTs) (sum of lines 1 and 2)	239,331
	Derivative exposures	
4	Replacement cost associated with all derivatives transactions (i.e. net of eligible cash variation margin)	49,561
5	Add-on amounts for PFE associated with all derivatives transactions	58,675
6	Gross-up for derivatives collateral provided where deducted from the balance sheet assets pursuant to the operative accounting framework	
7	(Deductions of receivables assets for cash variation margin provided in derivatives transactions)	
8	(Exempted CCP leg of client-cleared trade exposures)	
9	Adjusted effective notional amount of written credit derivatives	
10	(Adjusted effective notional offsets and add-on deductions for written credit derivatives)	
11	Total derivative exposures (sum of lines 4 to 10)	108,236
	Securities financing transaction exposures	
12	Gross SFT assets (with no recognition of netting), after adjusting for sale accounting transactions	59,525
13	(Netted amounts of cash payables and cash receivables of gross SFT assets)	
14	CCR exposure for SFT assets	
15	Agent transaction exposures	
16	Total securities financing transaction exposures (sum of lines 12 to 15)	59,525
	Other off-balance sheet exposures	
17	Off-balance sheet exposure at gross notional amount	171,456
18	(Adjustments for conversion to credit equivalent amounts)	(134,125)
19	Off-balance sheet items (sum of lines 17 and 18)	37,331
	Capital and total exposures	
20	Tier 1 capital	54,655
21	Total exposures (sum of lines 3, 11, 16 and 19)	444,422
	Leverage ratio	
22	22. Basel III leverage ratio (per cent)	12.30%
